

## The Digital Jukebox

**Discover the perfect music source for your stereo system... your computer...**

With the CardDeluxe™ from Digital Audio Labs, it's easy to turn your computer into the ultimate music playback machine for your stereo system.

### Why a computer?

Conventional stereo components are limited to one medium. For example, a CD player plays CDs, a DVD player plays DVDs, etc... From the very beginning, the computer was designed to be a multitask machine. Therefore, many different formats can be stored and played from a computer - DVD's, CDs, MP3s, WAV Files, etc... typical sound card

### Aren't computers noisy?

Yes they are. The limiting factor in any computer based audio system is the sound card. However, a properly designed sound card will reject noise leakage into the audio signal chain. It is the sound card's job to make sure the digital audio in the PC gets to the stereo system as cleanly as possible.

Typical multimedia sound cards simply don't cut it.

**QUICK TEST:** Connect your sound card to your home stereo system. Once the computer is powered on, without playing anything, turn the volume up on your stereo. You'll be surprised to

hear the severity of noise leakage!

**So how does Digital Audio Labs do it?**

That's where the CardDeluxe fits in. The CardDeluxe was designed with one goal: to attain the highest audio fidelity available in a computer. From the converter design to the type of connectors utilized, the CardDeluxe is the logical choice for audiophiles, music lovers and professionals. Try the QUICK TEST with the CardDeluxe, you won't hear a thing.
