

LACHAPPELL AUDIO 500CS 500 SERIES CHANNEL STRIP

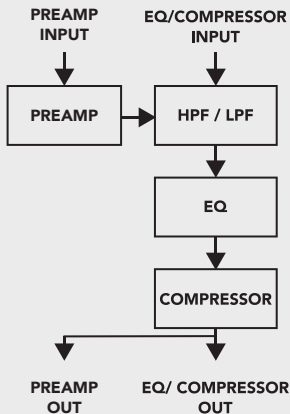

This Quick Start guide is intended to help you get up and running with the 500CS Channel Strip. Be sure to check out the full use guide at <https://www.digitalaudio.com/lachapellaudio/lachapell-audio-channel-strip/>.

SIGNAL FLOW AND SPLIT MODULE MODE

In standard mode, the whole module acts as a single channel strip. Pressing SPLIT MODULE splits it into two independent modules.

SPLIT MODE
SIGNAL FLOW

STANDARD MODE
SIGNAL FLOW

VU METER SWITCH

Set the VU to PRE to monitor the signal level at the output of the PREAMP.

On GR, The VU shows the gain reduction of the compressor before the makeup gain.

OUT displays the signal level at the output after the makeup gain.

BACK PANEL SWITCHES

SWITCH 1 should remain in the OFF position.

SWITCH 2 selects fast or slow attack and release for the compressor. Slow is default and usually more versatile.

SWITCH 3 determines hard or soft knee for the compressor. Soft is default and usually more versatile.
