

### POLE MOUNT

The pole mount configuration allows a CS-DUO or CS-SOLO to mount on a microphone stand that is already being used on stage, reducing stage clutter and eliminating the expense of purchasing dedicated stands for personal mixers.

The MT-1 is compatible with pole diameters between 3/8" to 1 1/4". This allows the MT-1 to work with a wide variety of microphone, music and percussion stands.

#### Before you begin, locate these features on the MT-1:

1. 2x Threaded knobs (1 3/4" length, 1/4" - 20 thread)
2. 1x Removable V-Clamp piece
3. 2x Captive thumbscrews (thread into CS-DUO or CS-SOLO)

#### To attach the MT-1 and CS-DUO or CS-SOLO to your mic/music stand pole:

1. Loosen the threaded knobs to the point where the V-Clamp can swing freely.
2. Insert the mic/music stand pole between the V-Clamp and the back of the MT-1.
3. Tighten the threaded knobs evenly until the MT-1 is fastened tightly to the pole.
4. While holding the CS-DUO or CS-SOLO, slide the CS-DUO or CS-SOLO down the flat face of the mount so the back wall of the personal mixer catches the alignment surface of the MT-1.
5. Still holding the CS-DUO or CS-SOLO, center it on the MT-1 and thread the thumbscrews into the personal mixer by hand. If permanent attachment is desired, the thumbscrews can also accommodate Flathead and Phillips screwdrivers.
6. Route cables through cable management openings.

# THREAD MOUNT

The mic stand thread mount configuration allows a CS-DUO or CS-SOLO to mount on a dedicated microphone stand. This mounting method is perfect for musicians that don't require other stands for microphones or music.

Four captive thread holes on the bottom side of the CS-DUO or CS-SOLO allow the personal mixer to mount in two different positions on the MT-1.

## Before you begin, locate these parts of the MT-1:

1. Large circle opening on the bottom side of the mount
2. 1x 5/8" - 27 nut (secured to MT-1 with V-Clamp screw).
3. 2x Captive thumbscrews (thread into personal mixer)

## To attach the MT-1 and CS-DUO or CS-SOLO to your mic stand:

1. Align the large circle opening on the bottom side of the MT-1 with the top of the microphone stand.
2. Secure the MT-1 by threading the 5/8" - 27 nut until it is finger tight.
3. To firmly lock the MT-1 in place, hold the microphone stand pole with one hand while turning the MT-1 with the other hand.
4. Locate the two captive thread holes on the bottom side of the personal mixer that are closest to the front panel. These are the recommended mounting connections on the CS-DUO or CS-SOLO for this configuration.
5. While holding the CS-DUO or CS-SOLO, align the MT-1 captive thumbscrews with the personal mixer captive thread holes mentioned in step 4.
6. Still holding the personal mixer, thread the thumbscrews into the mixer by hand. If permanent attachment is desired, the thumbscrews can also accommodate Flathead and Phillips screwdrivers.
7. Route cables through cable management openings.
